DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 27, 43 – 54, 68 – 69 are drawn to a device, method, and apparatus of synchronous integrated circuit having an output bus for outputting a plurality of output signals synchronously, classified in class 713, subclass 500.
 - II. Claims 28 - 42, 55 – 67, 70 are drawn to a device, method, and apparatus of dynamic random access memory having an output bus for outputting plurality of output data signals and a data strobe signal in response to a data read command, classified in class 711, subclass 105.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because outputting a plurality of output data signals and a data strobe signal in response to a data read command is not required to outputting a plurality of output signals. The subcombination has separate utility such as outputting data signals *in response to* the data read command.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
